## Powering the Smart Home

Connect your security, lights, locks, thermostats, video and more — for seamless automation and control. Check out the smart home below to see some of the features we can offer!

- **Light Control:** Manage lights with automatic schedules, and set rules to have lights automatically turn on in an alarm event for added visibility and safety.
- **Window & Door Sensors:** Sensors can notify you if a window or door is left open and communicate with your thermostat to help modify the temperature setting if left open for too long.
- **Water Sensor:** Don't let water leaks go undetected. Get alerts if a leak is detected and avoid potentially costly water damage.
- **Video Cameras:** Keep an eye on what matters to you. Peek-in to watch live streaming video anytime, get video alerts if a specific activity occurs, and watch recorded clips- all from your app.
- **Temp Sensor:** Add a temperature sensor to any room for added temperature optimization.
- **Image Sensor:** See what's happening when motion is detected. The image sensor snaps a picture and sends it to you, so you'll know what's happening.
- **Smoke & CO Detectors:** Protect your family with safeguards for dangerous conditions. In the event of fire, the system signals for emergency response. If carbon monoxide is detected it shuts down the HVAC to limit the circulation.
- **Irrigation:** How smart is your yard? With Alarm.com powered irrigation, you can take your irrigation off schedule, you can start or stop watering in real time or even pause a schedule.
- **Doorbell Camera:** See who's at the door with live video and two-way voice. If you're not home, you can speak to your visitor and even unlock the door for your trusted guests.
- **Smart Lock:** Eliminate the need for keys with smart locks. Give each user their own lock code, remotely lock or unlock the door through our app, and get a notification whenever a user unlocks the door.
- **Security Panel:** With a variety of panels to choose from, you can take advantage of features such as two-way voice for emergency response, and severe weather alerts that notify you if dangerous conditions are detected nearby. Alarm.com's Crash & Smash technology ensures that your system will still work even if the panel is smashed.
- **Smart Thermostat:** You can keep the family room comfortable on the weekend, make sure the nursery is exactly the right temperature at naptime, and have the whole house drop to a savings setting when nobody is there. The Smart Thermostat uses all the security sensors around the home so it can automatically respond to different conditions and activities.
- **Garage Door Control:** Always forgetting to close the garage? Get an alert of the garage is left open, and close it from your app.

For more information or to schedule your FREE no obligation consultation on your 100% customizable system, call MTC at 877-216-9951.

# Who is Home & Wellness?

You may have noticed that MTC has been talking a lot about a company called HOME & WELLNESS. But who exactly is Home & Wellness, what do they do and how are they tied in with MTC?

Home and Wellness is a smart technology company that is focused on keeping seniors and the physically impaired in their homes by creating an independent living environment, while allowing close, continuous monitoring.

The Home and Wellness management team consists of three partners who have decades of consulting, technical, financial and entrepreneurial experience. MTC is the fourth partner of Home and Wellness, and as you are aware, has been serving customers' needs in the telecommunication and technology industry for over 112 years! Together, the four partners have formed a team whose goals are to further our clients' care and efficiencies, to differentiate ourselves and to reduce operating costs while enhancing the senior living experience.

So think of it this way; if you or a loved one fell, would you want somebody to know? Would you or a loved one want to maintain independence and keep doing the things you love at home as long as possible? These are just two of the driving forces behind the creation of Home and Wellness and their Senior Safety System.

Through discreet sensors strategically placed throughout the home our system notices activity, and inactivity, and responds accordingly.

If no activity is sensed for a period of time loved ones or primary caregivers are notified. We provide comprehensive monitoring while still respecting the privacy of the senior, which is why no cameras are used in this system. With our lineup of sensors, you can also see if the care receiver has gotten in or out of bed, has taken their medication, or even if they have left a door open.

The time to make sure your loved ones are safe is before an accident happens. For more information on Home and Wellness and their Senior Safety System call (888) 851-4291, or email [kipp@homeandwellness.com](mailto:kipp@homeandwellness.com).

## 2018 Survey Winner!

**Congratulations to our 2018 MTC Customer Satisfaction Survey Winner.** By taking a few moments and completing the MTC survey online, **Becky Sears** received a \$5 bill credit plus was the winner of \$100! MTC uses this information to not only gauge how we are doing in terms of service and customer service, but also to explore new options in services and technology that you are wanting to see! Thanks again to **Becky** and the rest of the survey participants.

## MTC Holiday Office Closings

Thanksgiving 11/22 & Black Friday 11/23 | Christmas Eve 12/24 & Christmas Day 12/25
